PROFESSIONAL SUMMARY

Android Developer specializing in Kotlin, Jetpack Compose, Java, MVVM, and scalable mobile architectures. Owner of three production Android applications, including a full Kotlin + Jetpack Compose app, a Java → Kotlin migration, and a legacy Java app. Expertise in UI optimization, offline-first architecture, caching, memory leak prevention, and real-time location tracking for 10,000+ users. Delivered mission-critical features ahead of quarterly deadlines with strong problem-solving abilities (250+ LeetCode).

TECHNICAL SKILLS

- Languages: Kotlin, Java
- Mobile Development: Jetpack Compose, XML, MVVM, Clean Architecture
- Android Tech: Coroutines, Flow, ViewModel, LiveData, WorkManager, Services
- Tools & Libraries: Retrofit (client-side), OkHttp, Hilt, Coil/Glide, Gradle
- Database: Room, SQLite
- Performance: UI Optimization, Recomposition Control, Memory Leak Prevention, Caching, Offline Sync

PROFESSIONAL EXPERIENCE

SmartKargo Technologies Pvt. Ltd.

Jr. Mobility Developer | Nov 2024 – Present

- Owned development across 3 Android apps: a Jetpack Compose app, a Kotlin-migrated app, and a legacy Java app.
- Developed a high-performance location tracking system used by 10,000+ users, replacing Google APIs and reducing cost by 87%.
- Built fault-tolerant workflows handling network failure, GPS issues, stale data, permission errors, and token expiry.
- Prevented memory leaks using lifecycle-aware components and structured concurrency.
- Implemented multi-layer caching (Room + in-memory) ensuring offline-first reliability.
- Delivered a mission-critical logistics module ahead of quarterly deadlines despite high complexity.
- Migrated legacy XML UI into Jetpack Compose + Material 3, improving maintainability and UI consistency.

PROJECTS

Full Ownership Android Application (Kotlin + Jetpack Compose)

- Designed and built the entire application architecture using MVVM + Clean Architecture.
- Implemented optimized state management for smooth recompositions and consistent UI behavior.
- Developed authentication, dashboards, tracking, routing, analytics, and offline data sync workflows.

Driver Tracking App Migration (Java → Kotlin)

- Migrated a production-scale driver tracking app from Java to Kotlin for improved reliability and performance.
- Replaced Google Maps API with a custom in-house plotting solution reducing dependency costs by 80%.
- Maintained and optimized a Java-based logistics app used in production operations.
- Reduced ANR incidents, optimized RecyclerView loading, and modernized core UI components.
- Implemented Flow-based real-time updates and efficient background sync tasks.

ACHIEVEMENTS

- Delivered a high-impact logistics module ahead of the quarterly deadline.
- Scaled location tracking features to serve over 10,000 active users.
